skinny plank

swank.

www.interface.com/planks
Our **25cm x 1m skinny planks** bring new proportion and scale to carpet tile, giving you a range of spectacular installation options beyond what’s possible with squares alone.

Not that you should forget about squares. They’re still the core elements in the Interface system. Planks break from the traditional carpet tile aesthetic and expand our modular platform, giving you new power to create fresh, exciting floor designs.
Better performance, lower cost.

Love the look of wood plank flooring? Think luxury vinyl plank flooring is stunning?

Patterns – like herringbone or ashlar – make them appealing.

You get the same patterning possibilities with skinny planks. You get flooring that’s soft, quiet, and much more economical than hard surface. And, skinny planks installed without glue using Interface’s TacTiles® installation system is more adaptable than hard surfaces. Since many of our products are made almost entirely from recycled content, they are more sustainable and easily recycled at the end of their useful life.
the sincerest form of flattery
Basic Skinny Planks
Installation Methods

*Seamless.
*When installing skinny planks of the same style and color.

Or not.
PRODUCT COLORS 104146 WORN OLIVE, 104142 WEATHERED BLUE, 104145 ANTIQUE GREY INSTALLED ASHLAR

A shape that’s better at hiding seams.

Want the benefits of carpet tile without the look of carpet tile? Use skinny planks, same style and color, laid in an ashlar pattern. They’ll blend near seamlessly across the floor, giving you the benefits of modularity and the continuous look of broadloom.

now for the fun part
Planks or squares, our tiles all work together.

Besides 25cm x 1m skinny planks, the Interface system includes 50cm x 1m planks, 1m squares, and 50cm squares. All are dimensionally related to work in any combination, giving you a carpet tile design platform with unparalleled capability.
A more expressive visual vocabulary.

The skinny plank’s scale and directionality gives you an expanded range of design options. Create floors that better reflect the geometry and flow of surrounding space. Use contrasting skinny planks to create large scale tile patterns, provide wayfinding cues, or denote activity zones. And those ideas are just the beginning.
