

Interface®

Significant Environmental Aspects Troup County

Energy

- Reduce amount of energy consumed per unit during the production process
- Monitor energy usage
- Create air leak elimination program
- Educate employees on energy consumption to productivity relationship
- Utilize material improvements to reduce heat required on BL4

Fire

- Reduce risk of fire through:
- Emergency preparedness and response
 - Preventative maintenance
 - Compliance
 - Operational procedures
 - Fire suppressant
 - Evacuation drills
 - Hazardous material communication

Spill

- Reduce hazards associated with spills through:
- Adequate storage, containment, chemical labeling and storage plan (hazardous and non hazardous)
 - Hazmat training
 - Utilization of spill kits
 - Waste handling
 - EHS incident reporting
 - Spill Prevention Control and Counter (SPCC) measure training
 - Emergency preparedness and response

Recycling (Backing/Cutting)

- Reduce raw material waste with product and source material improvement
- Create a sustainable business model with zero negative environmental impact (Mission Zero)
- Reduce waste to landfill with proper labeling, separation of waste, Reduce and Reuse Frame Scrap
