

Protekt²[®]

Stain Protection from the Inside Out

Untreated

Topical stain treatments wear and wash away over time, leaving the fibers vulnerable to permanent staining.

Protekt²

Interface's Protekt² is permanently incorporated into the fiber for long lasting stain protection.

Because stain resist technology - Protekt² - is built into Interface carpet tiles, a topical stain resist treatment is not necessary. The additional polymer is included when the nylon is manufactured so it permanently increases stain resistance.

We conducted stain tests on our products and compared them to products with a topical treatment. The results? Our uncoated fibers performed just as well as the treated ones. Additionally, the fluorinated chemicals traditionally used in stain resist treatments, when they do wash off, persist in the environment for thousands of years. With Protekt², you get permanent stain resistance, not permanent pollution.

-
- ✓ STAIN PROTECTION
 - ✓ BLEACH RESISTANT
 - ✓ FREE OF FLUOROCHEMICALS
