Setting high standards in environmentally friendly product design.

The Blue Angel is the German Government's label for environmentally friendly products and services. As the first environmental label worldwide, it has stood for independence and credibility for over 35 years. The Blue Angel sets high standards for environmentally friendly product design and has proven itself as a reliable guide for a more sustainable consumption.

Exacting and recognized standards

The Blue Angel guarantees that a product or service meets high standards when it comes to its environmental, health and performance characteristics. In the process, these products and services are always evaluated across their entire life cycle. Criteria are developed for each individual product group that must be fulfilled by those products and services awarded with the Blue Angel. And in order to reflect technological advances, the Federal Environmental Agency reviews these criteria every three to four years. This process requires companies to constantly improve the environmental friendliness of their products over time.

Transparency and independence

The Blue Angel is a Type-1 environmental label according to ISO 14024. It thus meets the highest requirements when it comes to the standards it sets, the relevance of the award criteria and the independence, management and transparency of the development and award processes.

Our certified products.

Our global bestseller, **Composure**, has received the Blue Angel certification with its Graphlex and CQuest™Bio backings. Composure has been proven to have low emissions and odour, low pollutant and no negative impact on well-being in the living environment.

Composure

Composure's natural inspiration shows in the design and practical benefits. The refreshed palette takes on more colour, with both chalky pastels and poppy brights which can be used in isolation or using tonal colours together to create a transitional effect from light to dark.

Our default Graphlex backing offers a great blend of comfort, durability, sustainability and acoustic performance.

CQuest™Bio offers the best possible environmental performance. The bio-based content used provides a carbon-negative alternative to existing backing materials, reducing the overall carbon footprint of the finished carpet tile significantly and increasing the total recycled and biobased content.

Composure with Graphlex backing

75% yarn recycled content

A timeless, bio-inspired design in 32 neutral, bright & natural colours

Non Directional installation (time/cost gains)

Composure with CQuest™Bio backing

All the advantages of Composure with Graphlex

69.77% total recycled & bio-based content

Carbon-negative alternative to existing backing materials
